

# Desk Light

Group: Zero2Embedded

Tran Viet Thang

Tran Anh Toan

Trinh Minh Viet

Tran Le Long Vu

Instructor: MSc. Ho Viet Viet

**Faculty of Electronics and Telecommunications**  
**The University of Danang – University of Science and Technology**

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology
- 5 System Design
- 6 System Implementation
- 7 Demo

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology
- 5 System Design
- 6 System Implementation
- 7 Demo

- Desk lights are essential devices for studying
- Maintaining focus and managing time is crucial
- Common lighting devices only provide basic illumination
- Lack of integrated timer or Pomodoro time management features

**Solution:** Build a desk light based on ESP32-C3 to support time management and enhance learning efficiency

# Outline

- 1 Introduction
- 2 Project Objectives**
- 3 System Overview
- 4 Components and Technology
- 5 System Design
- 6 System Implementation
- 7 Demo

# Project Objectives

The group focuses on achieving the following objectives:

- Control on/off light with 3 different color modes
- Display time and countdown timer using Pomodoro via OLED screen
- Display and control through web/app interface

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview**
- 4 Components and Technology
- 5 System Design
- 6 System Implementation
- 7 Demo

# System Overview

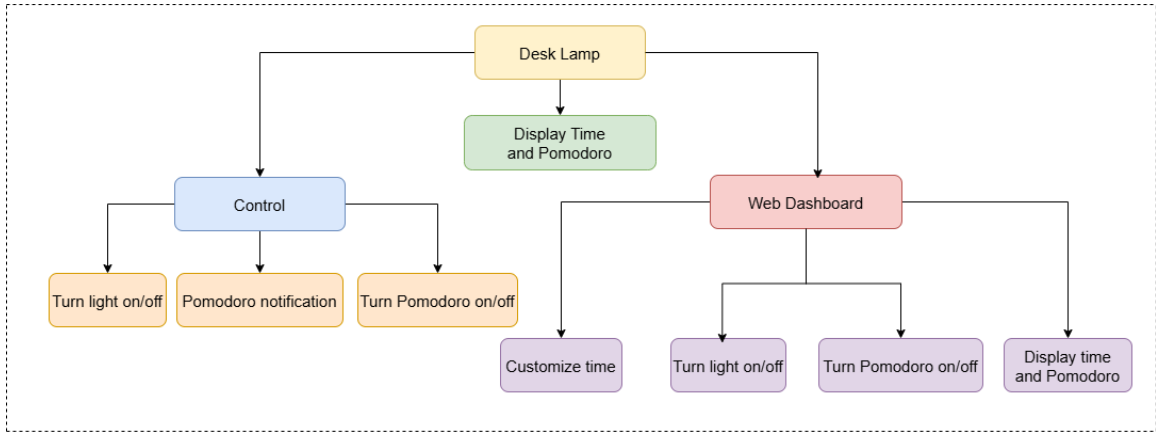

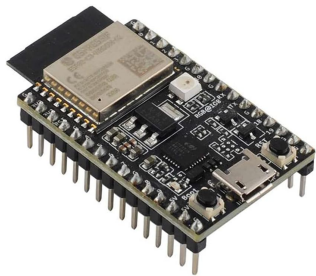

Figure 1: Functional block diagram

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology**
- 5 System Design
- 6 System Implementation
- 7 Demo

# Components Used

ESP32-C3 Microcontroller

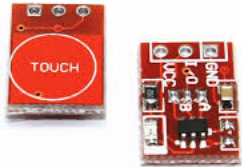

OLED Display

RTC Module

# Components Used

Touch Sensor

Buzzer

WS2812B LED Strip

## Technology:

- ESP-IDF for developing source code for ESP32-C3
- Flutter for developing web and mobile applications

ESP-IDF

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology
- 5 System Design**
- 6 System Implementation
- 7 Demo

# Hardware Connection Diagram

The system consists of 3 main blocks:

- **Flutter Application:** User interface
- **ESP32-C3:** Command processing
- **Peripherals:** RTC, OLED, sensors, LED strip

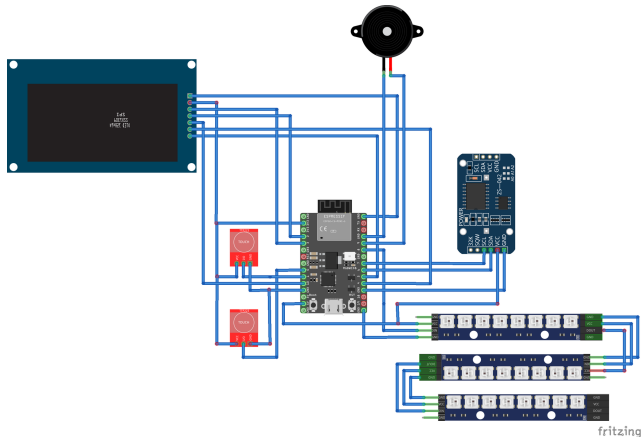

Figure 2: Connection diagram

# Operation State Flowchart

The system consists of 3 main tasks:

- **Switch Task**
- **Display Task**
- **Pomodoro Task**

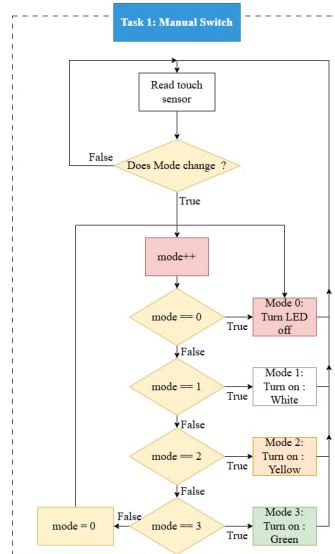

Figure 3.1: Switch Task

# Operation State Flowchart

The system consists of 3 main tasks:

- **Switch Task**
- **Display Task**
- **Pomodoro Task**

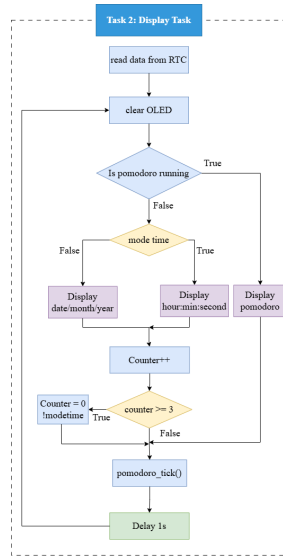

Figure 3.2: Display Task

# Operation State Flowchart

The system consists of 3 main tasks:

- **Switch Task**
- **Display Task**
- **Pomodoro Task**

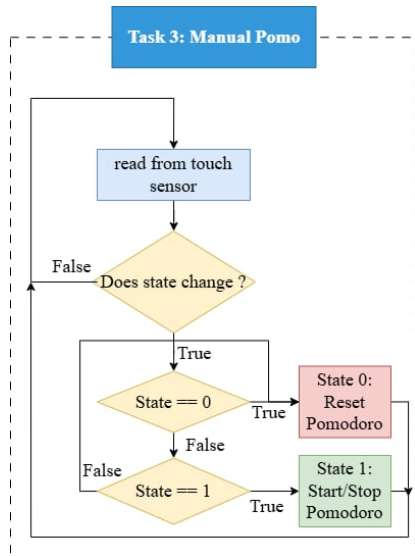

Figure 3.3: Pomodoro Task

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology
- 5 System Design
- 6 System Implementation**
- 7 Demo

# System Model

White Color

Yellow Color

Blue Color

**Actual system model**

## Flutter Application:

- Remote light control
- View time and Pomodoro
- Web and Android mobile support
- WiFi connectivity

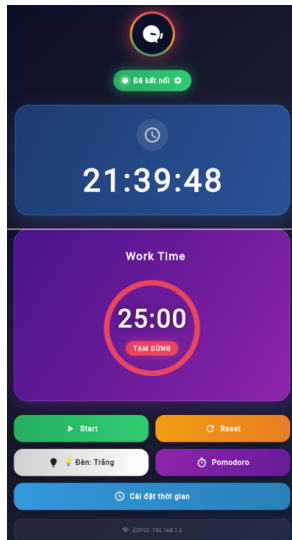

Figure 4: Web dashboard

# Outline

- 1 Introduction
- 2 Project Objectives
- 3 System Overview
- 4 Components and Technology
- 5 System Design
- 6 System Implementation
- 7 Demo**

# Demo Time

Name	Task
Tran Viet Thang	Implement Wifi connection and web, hardware communication
Tran Anh Toan	Implement a light function
Trinh Minh Viet	Implement a time display function
Tran Le Long Vu	Design hardware, implement Pomodoro function

# Thank you!
